Brief comment August 2021

In August 8a+ Sicav Monviso Class I returned -0,27% in a mixed global stock market context. In August the US main stock market indexes reached new heights whilst the main Asian stock market indexes underperformed in the wake of the deep correction observed in July. European stock market indexes registered positive results. The Dutch stock market index has been one of the European top performers in August, whilst the French main stock market index underperformed. Volatility levels peaked by the

half of the month but by the end of the month returned to the levels observed by the end of July. The Sub-Fund is still maintaining a short bias, actual shorts include Stoxx Automotive sector, Eurostoxx 50 and Ftse 100. Actual long positions include the Ishares MSCI Emerging Markets and the Hang Seng.

8a+ Sicav Monviso class I returns

With reference to the flexible investment approach it is not possible to designate a benchmark that properly represents the management policy. However, the expected annualized volatility of the sub fund will be below 10%.

Fund's Investment Policy

The Sub-fund pursues an investment strategy aimed at identifying potential trend reversals on a selected range of asset classes (stock indices, currency pairs, commodities and bond indices) by investing in financial instruments that better represent the underlying asset class. A mathematical algorithm identifies "excess" pattern conditions in terms of oversold or overbought which may determine a "return to the mean"; the algorithm also identifies entry levels on long or short positions on such asset classes, given a predefined level of profit-taking or stop-loss.
